ATTN: Film and TV industry suppliers and vendors

RE: Cleantech solutions for the Film & TV Industry

The **Sustainable Production Alliance (SPA)** is a consortium of the world's leading film, television and streaming companies dedicated to accelerating the transformation of the entertainment business into a more sustainable industry.

SPA is aggressively working to reduce the environmental impacts of physical film and television production. Our recently released [Close Up: Carbon Emissions of Film and TV Productions](#) report shows that **emissions from fuel use are most often the primary contributor to a production's carbon footprint**. As a result, to facilitate our transition away from fossil fuels, **we are actively seeking more clean, renewable energy solutions** to power our vehicles and equipment and electrify our facilities.

We are calling on manufacturers, suppliers, and vendors to accelerate the research, development, manufacturing, and deployment of zero emission equipment and fleets.

One pathway for funding is the \$40 billion [U.S. Department of Energy Loan Program Office](#) low interest loans for cleantech. We encourage you to explore this option for funding innovative technology at a larger scale.

We will continue to track our carbon emissions and engage with our film and TV productions in the quest to reduce our environmental impact. We encourage you to join us in supporting these efforts and are eager to hear about your progress on clean energy solutions so we may incorporate them on our productions.

Thank you,

[Sustainable Production Alliance](#)
